Learned preferences along controlled composition paths
Oxide/organic paths are composition-space probes; no phase transition is implied

Nb-Ta alloy (fixed 100 atoms)

Mo-W alloy (fixed 100 atoms)

Ti-Zr dioxide substitution (99 atoms)

Fe-Co monoxide substitution (100 atoms)

Organic C-H substitution probe (100 atoms)

Organic C-H-N substitution probe (100 atoms)

Organic C-H-O substitution probe (100 atoms)

Branch weight
